

Area-wide e-Laboratory for Food, Agriculture & Environment

[www.alfae.org](http://www.alfae.org)

The ALFAE has been established to contribute to society as the Food, Agricultural and Environmental Strategic Base in Asia-Pacific, consisting of 7 interactive working groups as shown in the chart below. Starting with the challenges in Food, Agriculture and Environment fields, we will also undertake the development of Education, Sightseeing and Culture.

First, we operate real time monitoring of the life environments such as environments, agricultural products and food. At the same time, we endeavor to establish the production and transportation systems, which can not only secure food safety but create sustainable culture for our future. Moreover, we contribute to provide comprehensive education for children and the next generation, establish and disseminate influential Product Standards in the society and bring about technical innovation in the global market.

●Board members only can take participate in the Planning & Branding, Technology Strategy and Standardization working groups.

For more information, please visit our homepage.
